

5.5 Inch PCAP Touch Screen With USB Interface _ CT-C8142

Such small size PCAP touch screens like 5.5", most products on the market are with IIC interface. We developed a USB interface touch screen, which is easy to fit and no need to calibrate. It is plug-and-play, compatible with Windows, Android, Linux and Mac operating systems.

It supports 10-finger touch, though it is not necessary for such a small size touch screen. Its controller is ILI2511 from ILITEK. ILI2511 is a single chip capacitive touch sensor controller optimized for POS, ATM and industrial capacitive touch panel applications. It also integrates a USB 5V to 3.3V low drop-out regulator and supports 1.8V/3.3V input power supply operation for I2C.

We are touch screen manufacturer with custom ability. Just feel free to contact and discuss with us about anything related to touch screens and optical bonding.
